Profile

I am really driven by our current state of affairs – both globally and locally – and the lack of, or slowness, of critical transition. My work and research channels an ecologically integrated and regenerative future – systems and strategies that make our environments and spaces recurrently positive and for the better of all living ecosystems.

I strongly believe Research, Strategy, and Design are at the core of these necessary adaptations – allowing for a total rethink of our current paradigms in the built environment. I look forward to continuing this journey, where we take on the role of Apprentices of the Earth, re-learning and re-teaching our innate connectedness with the natural world.

Education

The Royal Danish Academy of Fine Arts - Denmark

2021 - 2023 Master of Arts in Architecture (Strategic Design & Entrepreneurship)

Deakin University - Australia

2014 - 2019 Bachelor in Design (Architecture)
